Managing Human resources
E-Business Principles
Requirements analysis

Hi there! I am an aspiring Developer, Analyst and UI-UX designer, my degree gave me the skills required not only to develop and manage software, but also how they can be used to successfully grow businesses today. I love designing and providing the user a visual experience that become impossible to forget. Currently looking to grow and apply my skills while being adapting and working with teams. I believe that communicating with creativity can leave behind a powerful impact in ones life.

EDUCATION

Asian International PVT School

PROJECTS

Personal Website & UI-UX Portfolio

My Website link is available on my portfolio. Consists of my skills, personal interests, the major Projects I have worked on in the form of videos to get a better view of them.

Projects on Github

1. Smart Park (Final Year Project): A smart parking management system consisting of OCR, android application and Bluetooth BLE beacons (using SDLC, Agile)
2. Personal HTML/CSS/JS website
3. Sample React-Redux website
4. Basic Banking system website
5. Currently working on Blog App (MERN stack, CRUD, Rest API, Docker)

Business Projects

1. Strategic Analysis of various case studies such as Spinneys and more using SWOT, Porters 5 forces, Value chain analysis, market analysis & trends, VRIO, Brand positioning.
2. Marketing plan for a business and understanding consumer behavior, Product, Place and Price requirements.
3. Breakdown of an E-commerce website and re-evaluating the business and revenue models, functionality and technology to be used.
